

Giant Stack 'n' Tumble Tower

After building the initial tower players must remove the blocks one at a time from within the stack & place them back on top of the pile. As the tower grows higher it becomes more unstable & removing the wrong block will result in the tower crashing to the ground & the end of the game.

1. Find a firm & level surface. Build the tower by laying 3 blocks side by side & then stacking 3 more blocks on top of these, facing in the opposite direction (eg. the first 3 blocks facing west to east & the next 3 facing north to south). Continue in this alternating pattern until the tower is built & all blocks are used.
2. Each player takes their turn in removing one block from the tower (not the top layer) & replacing it on top of the pile facing in the opposite direction of the bricks immediately underneath.
3. Repeat this process until the tower falls over. The last player to successfully remove & stack a block is the winner of the game.

Suitable for 2 or more players aged 5 & over. Younger players should be supervised as this game is designed to fall over. The wooden blocks are a natural product and may discolour if stored when wet. Please dry carefully before packing away. The tower builds from 0.6m to over 1.2m depending on skill. This set contains 60x wooden blocks 20 x 4.5 x 2.5cm made from 100% FSC® certified wood. Item number: STACK014.
